

A. Selenium WebDriver: Selenium WebDriver is the one of most popular API which is widely used for Web Automation. Many QA Automation tools are build over Selenium WebDriver. This is the reason for Selenium is very popular Skill Set for Quality Analyst. Expertise level Selenium knowledge also helps QA get better career opportunity. But as we know that Automation using Selenium is bit tough as some coding knowledge is required. So, ThoughtCoders is designed a very intuitive training program on Selenium which helps trainee to understand properly and quickly. Along with Selenium Webdriver we provide training on Core Java, Git, Maven Jenkins, Linux commands and Database Testing.

B. Katalon Studio:

Katalon Studio is best tool for Web, Mobile and API automation. Katalon Studio is build over top of Selenium and Eclipse. It support full feature of Selenium. Katalon framework is robust and reliable framework which reduces the difficulties of Selenium framework design. It support record and play, manual mode and script mode. Learning Katalon Studio and ease of use is quite simpler as compared to conventional selenium framework. It support integration with Jira, Jenkins, Suace Labs, Test Rail, Continuous Integration and Deployment and many other external utilities.

If you are looking for detailed training on Katalon Studio training then join ThoughtCoders. To join ThoughtCoders feel free to call on 9555902032.

C. API Testing- API (Application programming Interface) is the heart of most of the complex business Application. It is used to integrate a different application. API (Web services) Testing is the most demanding and trending skill set where you will get a huge job opportunity. Expertise knowledge on API (Web Services) helps you to get high paid jobs. Till the time no institute provides expert-level API Training. So ThoughtCoders is designed Industrial level API Testing Training Program. We provide Expert level training on API(Web services) using POSTMAN, RestAssured, SOAP UI, KATALON Groovy. Our courses are job oriented, training provided by Corporate Professionals and provide on live projects.

If you are looking for detailed training API training then join ThoughtCoders. To join ThoughtCoders feel free to call on 9555902032.

In API testing training, we will cover REST and SOAP API and tools used in these Testing such as POSTMAN and SOAP UI. API automaton using SOAP, Rest Assured and Katalon Studio. In addition to this, whole training will be provided on live Industrial Project, interview guidance

and mock interview session. ThoughtCoders provides support till job placement of trainee and help in interview scheduling.

D. Core Java Training:

E. Software Testing Training (Manual Testing Training):

Software Testing is the important part of Software Development Life Cycle(SDLC). Due to increasing Software complexity huge numbers of Software Testers are required in industries. And Software Testing Training is one of the area where huge number of jobs are available. Our training module covers various domain Banking, Health and Welfare, Electronics, Automobile and Telecom.

Salient Features of ThoughtCoders Software Testing Module

- Gives you expertise in Software Testing.
- Fully job oriented training module.
- Nominal Price (50% of Market Price).
- Offer to work on live projects.
- Guideline for professional resumes writing and Interview preparations.
- Special classes for Quantitative Aptitude and Verbal to Crack written exams.
- Full Support till Job Offer.
- Provide sufficient training to Crack ISTQB.
- Unlimited Practice Sessions.
- Special classes on Domain Specific Projects.
- Internship Training for all college level students on Live Project (Diploma, Graduate and Post Graduation)
- Online Training facility is also available.

Courses Outcomes: After successful completion of Techie Solutions software testing module trainee will be able to

- Plan and apply appropriate level of testing with the context of a software development application to the satisfaction of its beneficiary.

- Design specific and sufficient test cases to ensure coverage and traceability to requirements.
- Use problem reporting techniques metrics and testing status reports to communicate testing results to colleagues and end users.
- Select and apply testing modules, process and practices appropriate for the SDLC of a project.
- Apply principles and practices of test driven development to improve testing and QA process and minimize testing time
- Able to use bug reporting tools like JIRA, BUGZILA, HPQC and many tools. Also trainee will manage pending task and estimate team task etc.

F. ISTQB Training:

ISTQB is very important certification for Software Testers. This certification assures that certificate holder have very strong knowledge of Software Testing Process. These days recruiters prefer candidate having ISTQB certification. In other words we can say ISTQB is very crucial certification for Software Testers.

ThoughtCoders is providing training program for ISTQB. This module is developed by experts who analyzed well versed ISTQB syllabus and pattern. This module is very concise and assured your success in ISTQB. After completion of this course students will be able to:

- Should crack ISTQB Certification Exam
- Should able to prepare test data to 100% test coverage and able to plan test application with full coverage.
- Students will able to review testing process and expert in Software Testing Fundamentals
- Students can crack all software testing recruitment process.

For More Information about ISTQB exam patterns and syllabus please feel free to call us on 9555902032.
